#### Features:

Unit occupies 40% to 50% less space than comparable volume drum filters Can utilize all high efficiency media Bungee cord holding device simplifies media removal and installation Heavy duty stationary cast aluminum nozzles Low maintenance & cost requirements The Circle Vee is fabricated from heavy duty structural steel.

## Options

Split plenum wall & cages Single or double outlet

#### Industries

Textiles, paper, tobacco, wood, plastics, agricultural & rubber dust applications.

## **Available Services:**

- System Integration
- Industrial Ventilation
- Material Handling
- Power & Controls
- Manufacturing

# **Product Description**

The ATMOS360 Circle Vee Drum Filter is a revolutionary concept in air filtration. With its unique design, the Circle Vee can be installed in a fraction of the space required for conventional systems. The stationary nozzles clean both sides of the media as the Circle Vee rotates. The stripper fan cleans fine dust and other materials from the filter media making the Circle Vee completely self cleaning. Clean media assures a uniform pressure throughout the system.

The filter media collects airborne particulate causing the static pressure to increase. pressure differential switch senses the increase and activates the cleaning cycle. Dust s vacuumed from the rotating filter media and transported to a dust collector for further disposal or processing.

The Circle Vee is available in a wide range of sizes and configurations to accommodate air flow rates from 5,500 cfm to 136,000. See our capacity data sheet for more information on sizes, configurations and air flow rates.

AUTOMATIC SELF CLEANING CIRCLE-VEE FILTERS
